

Vehicle safety check

Take a spin around it first.

Every time you use a postal vehicle make a safety check. Follow the steps outlined in Notice 76, *Expanded Vehicle Safety Check*. Tell your supervisor about defects, unsafe conditions or damage. Request immediate repairs if there's low brake pedal pressure or a faulty emergency brake, broken lights or turn signals, defective wipers or defroster, or tire wear.

Doing the safety check before you drive puts you in control of your own safety — and the safety of others.

And that's smart safety.
