

Asbestos survey

Survey it for safety.

Before starting any work that will impact building materials, make sure you know whether it contains asbestos. Check the environmental toolkit on the Blue intranet for your facility's asbestos survey. If there's no survey available, contact your district safety office for assistance.

Reviewing your facility asbestos survey and knowing the locations of asbestos-containing building materials and presumed asbestos-containing materials allows you to take actions to protect your employees from health problems caused by inhaling asbestos dust.

And that's smart safety!

For additional information or guidance, contact your safety office.
