Password expiring soon? Consider switching to a strong passphrase — a unique and memorable set of words. It's the first line of defense for protecting sensitive Postal Service information.

Keep these tips in mind:

- Use a unique set of words and replace letters with special characters and numbers — for example, H@ppyN3wY3*r20!9!
- Avoid using easily guessed words, like family members' names and birthdays.
- Make passphrases as long as possible, which makes it more difficult for criminals to guess.
- Never share your passphrase with others — including trusted colleagues.

Protecting USPS information with strong passphrases is smart business.
