Your **SMART** **SAFETY** Moment

Automated Equipment

Don't get Caught up.

Enforce these basic safety rules around automated equipment:

- ➢ Never allow untrained employees to work on or with automated or other powered equipment.
- ➢ Employees must observe and follow all warning signs and notices that have been installed on equipment for their protection.
- ➢ Employees must comply with all safety and health regulations, procedures and practices.
- ➢ Warn employees not to wear loose clothing, long or unconfined hair, or dangling jewelry around equipment.
- ➢ Never allow employees to override or disable safety interlocks or switches.
- ➢ Make sure employees check for defects in equipment before using.

Supervisors are responsible for documenting and maintaining employee training records.

And that's smart safety!
